

# CloudMile Supports Pentium Network Create Cybersecurity Solution

CloudMile helps Pentium Network to evaluate and implement GCP solutions including Google Compute Engine, Cloud SQL relational database services and Google Kubernetes Engine for containerization development.

## The challenge

Pentium Network has been focusing on two business strategies: cloud management and cybersecurity for its customers and thus aims to adopt a cloud platform that can fully support hybrid/multi-cloud services. Google Cloud also supports containerization development which can shorten service development cycle and enhance products and services immediately.

## The solution

With CloudMile's assistance, the customer utilizes GCE for high scalability in computing, and Cloud SQL for fully managed relational database services. This service provides automated backups and capacity upgrades, significantly reducing the personnel costs associated with database establishment and management. It also adopts GKE service for more efficient deployment and container management.

## The result

With GCP and CloudMile's support, Pentium Network is able to provide stable hybrid and multi-cloud cybersecurity solutions to the market. Particularly with GKE adoptions, the containerization modules have accelerated the rollout of new services, enabling the Pentium Network to quickly respond to its end users' demands.

“ We highly value CloudMile's expertise as a Managed Service Provider and its professional services, and look forward to our future collaboration in the Asia-Pacific region. ”

Chao Chun Chang, CEO, Pentium Network

### About Pentium Network

Pentium Network, established in 2017, is a Taiwan-based software company that specializes in hybrid and multi-cloud solutions. The company's mission is to enable enterprises of all sizes to successfully adopt hybrid and multi-cloud IT infrastructure.

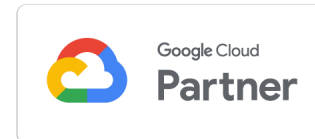

Vertical/horizontal solution: Software & Internet

Primary project location: Taiwan

### About CLOUD MILE LIMITED

CloudMile is a Data Analytics and Artificial Intelligence company empowering businesses to accelerate digital transformation through cloud technology.
