

## All the benefits of a cloud native suite

EnnovaGo helped Babacasa in the email migration process and in the correct adoption of all the Google Workspace applications.

### The challenge

The challenge was to migrate the client's entire onprem environment to Google's cloud servers and guide him to the correct use of the suite.

### The solution

The solution was to install the GWMME tool inside one of their Windows machines connected directly to their local Exchange mail server, which allowed the migration of the email history from the Exchange OnPrem server to the Google servers via the IMAP protocol.

### The result

Thanks to the efficiency of the tool and the very low downtime, the customer was able to establish a standard of internal collaboration and was also able to start using all the apps included in the suite, especially Gmail, Google Chat and Google Drive. The perfect functioning of the suite has allowed the company to save a lot of money, avoiding the external help desking support service.

“Despite challenges, our team overcame the obstacles to achieve success through strategic collaboration with GCP and Google Workspace, pivotal in Frimm's technological ecosystem transition. With Google Workspace, Frimm is fostering seamless collaboration, boosting productivity, and ensuring secure data management simplifying their IT management and integration with other services”

Alessandro Mariotti, CEO & Co-Founder, Babacasa

#### About BabaCasa

Babacasa pioneers real estate technology, driven by a dedicated team passionate about innovation. Their enduring partnership with Frimm witnessed a transformative technological journey, culminating in the successful cloud and email migration of their infrastructure in January 2023.

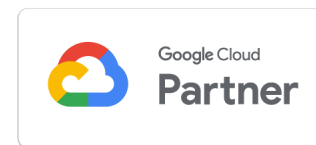

Vertical/horizontal solution: Software & Internet

Primary project location: Italy

#### About Ennova Research srl

We work in AI, cloud, and digital transformation. We offer innovative GCP-based solutions and advanced GWS collaboration systems
