

Notre Dame Alumni Association Drive Storage Cleanup

Google Workspace Service Provider

The challenge

After years of unlimited storage, the organization was tasked with getting their Shared Pooled Storage for Google Workspace for Education below their allotted quota.

The solution

After identifying users which needed data cleaned up, Burwood's team wrote performed the tasks of removing users ability to create new files, expunged the user files, followed up on error logs and ensured that data was ultimately expunged from the environment.

The result

Burwood Group targeted specific users within NDAA and deleted drive data for those users, leaving files discoverable within Google Vault and process for limited recovery and future cleanup. Burwood Group also raised tickets on NDAA's behalf with Google Support connected with unidentifiable Drive Storage usage and provided the necessary scripts and explanations for future reference.

“ The team from Burwood was flexible and took the time to develop an approach that was not only effective, but that worked well for both our Google environment and our team's skill set. We found the processes to work smoothly and were pleased with how easy their team was to work with. ”

Todd Lemons, IT Solutions Consultant, University of Notre Dame Alumni Association

About University of Notre Dame Alumni Association

Alumni Association for the University of Notre Dame.

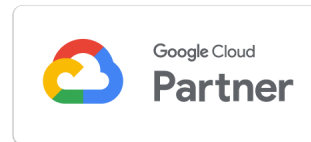

Vertical/horizontal solution: Education

Primary project location: United States
