

Banque Edel: Digital transformation with Google Distributed Cloud

Provide comprehensive project guidance: develop reference architecture, build Google Kubernetes Engine on VMware, assist with deploying applications, and train dev/ops teams on platform management.

The challenge

The primary challenge stemmed from the operations and development teams' limited familiarity with the Google Distributed Cloud solution. Therefore, knowledge transfer was crucial to enable the operations team to manage the platform independently.

The solution

Devoteam G Cloud configured the infrastructure, deployed the services, and integrated the tools necessary for the implementation of a DevOps culture and a CI/CD chain. At the same time, thanks to its expertise in security and its Managed Service Provider certification, Devoteam G Cloud implemented management and monitoring processes validated via a security audit carried out before the launch.

The result

- meet all Banque Edel needs in terms of security - operational efficiency - speedy app deployment - modern, flexible and scalable infrastructure

“ We have succeeded in implementing a GDC Virtual (VMware)/GKE Enterprise platform that not only meets our specific needs in terms of security and regulatory compliance, but also greatly facilitates our operational processes. The speedy deployment and the efficiency of this solution have given us access to a modern and flexible infrastructure that is ready to evolve. ”

Emmanuel Cros - Banque Edel CIO

About Leclerc - Banque edel

For more than 30 years, Banque Edel's core business has centered around e-banking and investment/financing solutions. Founded in 1991 by E. Leclerc—with a 34% share held by Groupe BPCE—it employs over 180 people tasked with developing an innovative and attractive service offer adapted to the needs of its clients.

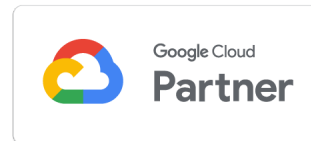

Vertical/horizontal solution: Financial Services

Primary project location: France
