

Vibra Foods extracts more from SAP with Google Cloud

Our role was to extract data from SAP through the Aecorsoft Data Integrator software, transferring the data to an analytical database (BigQuery) to provide greater flexibility for processing information in Business Intelligence tools

The challenge

Vibra's challenges included ensuring the generation of insights from data coming from the SAP platform for business teams, enriching BigQuery with data from SAP, automating the loading of data into dashboards and making the Cortex framework available with data coming from SAP, reducing development and maintenance efforts for data modeling/ semantic.

The solution

The solution was to extract information from the client's SAP ERP through Aecorsoft software, insert the information into BigQuery and apply the Cortex Framework to facilitate the processing of the extracted data in the client's data processing tools.

The result

The project led the client to automate data loads from the approximately 200 dashboards used for management, operational controls, production and decision making. With the new Data Warehouse, Vibra Foods could achieve greater data reliability and precision, as well as broad possibilities for exploring information, positively impacting the management, organization and growth of the company.

“The implementation of the Data Warehouse provided Vibra Foods greater security in data management and distribution, and increased the reliability of information, eliminating the need for human efforts in several processes previously carried out manually. Furthermore, it enables access to new technologies and resources, simplifying employees' daily activities and boosting the company's results.”

Juliano Matheus Mertins - Data Analyst

About Vibra Foods

One of the largest poultry companies in the country and one of the only ones in the segment that has a complete production chain, it is a specialist from farm to retail. An organization responsible for the use of resources and the environment, acting ethically, valuing and respecting, constantly contributing to economic development.
