

Unlocking the Potential of APIs with Apigee for Grupo BC

Devoteam presented options for Grupo BC to improve their efficiency on the integration with their teams. Devoteam's expertise has enabled Grupo BC to significantly advance its evolution towards a more digital environment and optimize its ecosystem

The challenge

Grupo BC needed a centralized API Manager with local agents to improve efficiency and latency for its AI and document management services. The solution aimed to streamline processes and accelerate product launches.

The solution

Grupo BC, in collaboration with Devoteam and Google Cloud, deployed Apigee to manage its APIs on Google Cloud and other cloud platforms. The primary goal was to mitigate service latency, especially for AI-intensive tasks. Apigee's Envoy adapter allowed for optimized routing and latency control, ensuring efficient handling of API requests while maintaining governance and security.

The result

Apigee, implemented with Devoteam, has revolutionized Grupo BC's operations. It centralized API management, improving governance and security, and simplified API lifecycle management through seamless integration with existing tools. Apigee's non-intrusive modification capabilities, SLA measurement, team collaboration features, and streamlined development processes accelerating project delivery

“ A success in the field of building new End-to-End business models in complex multi-enterprise microservices environments. ”

Óscar González, CTO

About Grupo BC

Grupo BC is a leading banking and real estate outsourcing company based in Europe and Latin America. It has more than 5,300 employees, of which 500 work in the IT department. The company was founded in 1974 and has since grown to become one of the leading outsourcing service providers in Spain and Latin America.
