Animex - SAP migration to Google Cloud

OChK team was responsible for preparing and delivering a project to migrate the SAP environment to Google Cloud.

The challenge

Animex uses IT not only in business support areas, but also in the management of critical processes, such as control in production plants and livestock farms. To ensure business continuity, Animex developed a Disaster Recovery Plan that kept data centers in Poland on standby, which was expensive. Another challenge was the lack of automatic switching to a backup in the event of a failure.

The solution

The OChK team prepared a landing zone in Google Cloud. More than 30 SAP VM were moved there. The entire environment now operates as a hybrid cloud, within the connections between applications placed in cloud and on-premise. Also, a Disaster Recovery Center has been deployed in different GC regions. In the event of problems, automatic tools can switch the company to backup infrastructure.

The results

Thanks to the transfer of SAP systems to the Google Cloud environment prepared by OChK, Animex has significantly increased its resistance to risks related to data center failure and security incidents. Also, cost control and automation tools ensure that parts of the environment are shut down outside office hours, which provides savings and a simultaneous increase in work efficiency.

> " The OChK team thoroughly analyzed our requirements, and thanks to their extensive knowledge they selected Google Cloud solutions and services that fulfill these requirements. The migration project was professionally prepared and carried out, while maintaining cost discipline and ensuring adequate efficiency. "
>
> Artur Kaczmarek, CIO Animex

About Animex

Animex Foods is the largest meat company on the Polish market, specializing in the production of pork, poultry, and processed meat, operating since 1951.
