

Unlocking Scalable Security: Nordnet's SIEM

Migrate all their existing Security Telemetry to Chronicle Security information and event management

The challenge

Managing and analyzing data from various sources was complex and time-consuming

The solution

Devoteam helped Nordnet migrate to Chronicle, leveraging its scalability and ability to handle large data volumes efficiently. Devoteam's expertise in Chronicle was crucial in configuring the platform to leverage features like advanced threat detection and pre-built integrations.

The result

By implementing Chronicle with Devoteam's help, Nordnet has achieved improved security visibility across its infrastructure. Devoteam has helped Nordnet streamline threat detection and investigation processes, leading to faster response times and reduced security risks. Today, the company has better insights to meet regulatory requirements more efficiently.

“ Devoteam G Cloud brought technical expertise to our project. They guided us with best practices, helping us avoid mistakes early in the implementation that could have had substantial impacts later on. A key reason we chose Devoteam was their willingness to share their knowledge, which greatly contributed to our team's growth and understanding of the implemented product. ”

Mattias Söderin, Information Security Officer, Nordnet

About Nordnet
