

# Visma Embarks on a Digital Transformation Journey to Boost Efficiency

CTS was tasked with assisting the organisation with their migration to Google Workspace. Additionally, CTS also helped their staff become familiar with Google's capabilities; in order to drive adoption and transform the way the organisation works.

## The challenge

Previously working on 'cloud-on-prem' software, Visma wanted to move to Google Workspace. They needed to develop a cloud strategy that would provide enhanced capabilities to their employees, to increase collaboration and efficiency. Their main goal was to incorporate a more collaborative way of working, which led them to a decision to start looking at cloud options.

## The solution

CTS helped Visma migrate to Google Workspace using their world-leading migration software, CloudM. CTS also helped their team become familiar with Google Workspace and make the most of its capabilities through a tailored change management plan. The team delivered training in the Visma offices, where they enabled staff to work together and collaborate using Google Workspace.

## The results

Working with CTS, Visma migrated over 8000 users to Google Workspace and helped their employees to work more collaboratively and efficiently within their company. Visma have transformed the way they work by utilising Google's tools and continue to drive innovation.

“CTS have really helped transform our company. When support or anything is needed, they are here for us, and we can rely on them to help us reach our goals, especially when it comes to Google Workspace and GCP. They are true cloud specialists.”

Mihai Comsa, Service Owner at Visma TNC
