

Application Migration for India's Leading Insurance Company

Niveus played a crucial role in HDFC Ergo's modernization journey by successfully migrating the application layer from on-prem to cloud, leading them to become an AI and Digital First transformation organization.

The challenge

HDFC Ergo envisioned to modernize their applications and reach a larger customer base by transitioning to cloud infrastructure. The main objective was to advance their journey towards modernization, effectively migrating the application layer from on-prem to the cloud, enabling them to evolve into an organization focused on AI and digital transformation.

The solution

Niveus successfully migrated the application layer to Google Cloud Platform as part of the HDFC Ergo's Brownfield Migration. The API Layers were hosted in GCP on an Unmanaged Instance Group by Google Compute Engine. The ability to leverage GCP and Lift and Shift strategy for servers which were formerly on Prem, enabled traffic flow between the API layer in the GCP.

The result

In collaboration with Niveus, HDFC Ergo successfully migrated 117 Compute Engine VMs from on-prem to Google Cloud Platform (GCP). With this Migration, HDFC Ergo has laid the foundation to propel innovation and creativity across the organization, building resilience and endurance for the businesses with a stronger push to create long-term value.

“The Niveus Team has executed the migration successfully. We are delighted with the results of the project, and highly recommend Niveus Solutions to any organization looking to migrate to the Cloud.” ”

Sriram Naganathan, Chief Technology Officer - HDFC Ergo General Insurance

About HDFC Ergo General Insurance Company

Niveus played a crucial role in HDFC Ergo's modernization journey by successfully migrating the application layer from on-premise to the cloud, leading them to become an AI and Digital First transformation organization.
