

Cloudreach deploys GCP Landing Zone for SUSE

Cloudreach deploys GCP Landing Zone for SUSE, streamlining the development and testing of customer applications.

The challenge

SUSE's team engaged Cloudreach to implement a GCP Cloud Landing Zone. SUSE requested the Landing Zone to provide a cloud environment for its engineers to rapidly develop and test SUSE applications which customers run in their GCP public cloud production environments.

The solution

In just 2 weeks, Cloudreach set up the CLZ: Cloudreach's cloud architect provided design & executed a CLZ. The CLZ was configured with an account structure according to GCP best practices & Cloudreach set up a billing account via its reseller agreement with SUSE. Finally, Cloudreach provided SUSE with a Governance Report to help SUSE manage the CLZ according to security & compliance best practices

The results

The implementation of the GCP Cloud Landing Zone was a success for SUSE, enabling their engineers to develop and test new SUSE applications on GCP quickly, a template for future development and the governance framework gave SUSE a much higher degree of control over its cloud environment.

In just two weeks, Cloudreach set up the Cloud Landing Zone which enabled SUSE to streamline the development and testing of customer applications

About SUSE Software Solutions Germany GmbH

SUSE is a German-based multinational open-source software company that develops and sells Linux products to business customers. Founded in 1992, it was the first company to market Linux for enterprise. It is the developer of SUSE Linux Enterprise and the primary sponsor of the community-supported openSUSE Linux distribution project.

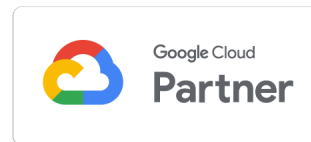

Industry: Software & Internet

Primary project location: Germany
