

Yummy Google Workspace Case Study

Yummy began working with Woolpert to employ more sustainable uses of Google Maps APIs. Repeat positive experiences eventually prompted Yummy to transfer its Google Workspace contract to Woolpert.

The challenge

After Yummy Rides launched in July 2021, the company saw trips triple from 30,000 to 100,000 in the first two months. The company also experienced internal growth as it expanded into Bolivia and hired employees across North America, Europe, and South America. They needed a more efficient way to maintain business operations with a geographically scattered team and expanding customer base.

The solution

Google Workspace was implemented to resolve Yummy's efficiency and security concerns. Yummy can control access to its company drive, store data securely, and streamline operations. During the COVID pandemic, Google Workspace provided a fundamental tool for successful remote work.

The result

Yummy built and executed its own policies to diminish the business risks of handling confidential data. Yummy also relied heavily on a secure platform for video meetings. Using Google Meet, the Yummy team has been able to stay connected securely with enterprise-grade video conferencing built on Google's robust and secure global infrastructure.

“Over time, you'll need access control, to be able to store more gigabytes of data, and to operate more efficiently, and I think that won't be possible without Woolpert and Workspace.”

Ignacio Carrillo-Batalla, Chief Technology Officer, Yummy

About Yummy Inc

Yummy, the first third-party food delivery and rideshare service in Venezuela, advances mobility solutions through better connectivity.

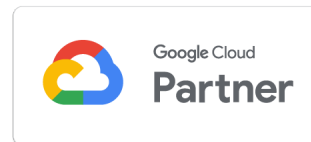

Vertical/horizontal solution: Software & Internet

Primary project location: Venezuela

About Woolpert, Inc.
