

Bespin Global helps Surecar migrate to Google Cloud

Bespin Global helped Surecar migrate to Google Cloud. In addition, Bespin Global assisted Surecar in adapting additional Cloud features by adequately evaluating and selecting the appropriate, cost-effective Cloud solutions.

The challenge

Initially, Surecar used on-premises servers. As their business expanded, the required capabilities and workloads also increased. As it was too expensive to buy additional servers and workload demands were unpredictable, Surecar needed to find a cost-effective way to improve its infrastructure's performance, scalability, and reliability.

The solution

After evaluating the leading Cloud platforms, Surecar chose to migrate to Google Cloud for its flexibility and performance and adopted Google Kubernetes Engine (GKE) at full scale. With Google Cloud, the availability of the clusters is guaranteed because Kubernetes can be quickly created. Furthermore, Google Cloud migration also enabled Surecar to access other helpful infrastructures through GCP.

The results

1) Reduced server management time from 20 hours per month to 0 hours. After migrating to Google Cloud, Surecar has improved the reliability and stability of services during traffic surges. 2) Strengthened high levels of security by migrating to the Cloud. Surecar was able to keep personal information more secure through GCP. 3) Built the infrastructure at predictable & affordable costs.

“In order to adopt and migrate to the Cloud more efficiently, we needed a reliable and knowledgeable partner. Bespin Global provided expert advice on Google Cloud's feature selection, pricing, and service inquiries. If you are looking for a reliable partner, I would definitely recommend Bespin Global for its Google Cloud migration expertise.”

— Il Sun Baek, CEO, SureCar

About Surecar

Surecar specializes in selling new and used cars as well as long-term car rental, leasing, and car transfer services by collaborating with over 300 domestic capital and rental companies. Surecar developed its own ERP solution to help its partner salespeople manage their customers in order to lead the growing automotive finance market.

Industry: Retail & Wholesale

Primary project location: South Korea
