Snoonu: Towards a Unified Work Environment

iSolution helped Snoonu implement Google Workspace, providing project initialization, GWS console configuration, data migration, change management, and application integration to improve collaboration, security, and efficiency.

The challenge

Snoonu was facing some challenges with its existing IT infrastructure. They were using multiple tenants for each domain, which was causing a number of problems, including data migration difficulties, downtime, and security concerns. Snoonu was looking for a simple and powerful solution that could replace its existing setup to improve communication, collaboration, and achieve zero downtime.

The solution

Snoonu's productivity challenges were solved by implementing Google Workspace, a comprehensive suite of tools that integrated seamlessly with their existing systems. iSolution helped migrate data quickly and easily, and employees benefited from improved collaboration, reduced costs, and increased productivity. We also integrated Google Workspace with other applications and built an intranet site.

The result

iSolution successfully transitioned Snoonu out of multiple GWS tenants into a single one with zero downtime for all domains. On another hand, Google Workspace has ultimately reshaped Snoonu's remote work capabilities, environment, data security and resulted in improved communication and collaboration between employees.

> Thanks to Google Workplace, Snoonu experienced a remarkable transformation. Streamlined collaboration, efficient communication, and seamless file sharing boosted our workflow and productivity to new heights. It's the ultimate tool for success!

About Snoonu

Founded in 2019 by Hamad Al Hajri, an entrepreneur and startup expert, Snoonu aims to revolutionize the Qatari market with the fastest services and the most diverse marketplace, facilitating online shopping, lifestyle, food, grocery delivery, and third-party logistics services for startups and SMEs in Qatar.
