

Bio SB Automates Document Control and Workflows with AODocs

BioSB deployed AODocs Quality Management System (QMS) Solution on top of the existing Google Workspace environment to address the need for strict document management, control, and regulatory compliance of its processes.

The challenge

As an emerging player in the life sciences space, Bio SB needed to implement a modern and more effective solution for document control. Bio SB required a platform that would enable the company to manage documents and records in a manner that was compliant with several industry regulations, and that also integrated with Google Workspace.

The solution

AODocs QMS leverages the DMS platform for workflow implementation, records management, document control, change management, and process control, and allows Bio SB to adhere to numerous industry regulations. The company has automated its records management and document control processes with AODocs in a manner that meets regulatory requirements.

The result

AODocs allowed BioSB to have control over the quality documentation and processes associated with the experimentation and production activities. The controlled documents serve as a template for the creation of new records, which often occur daily. Being able to enforce strict document control procedures on this process with AODocs ensures efficacy and consistency across the companies' processes.

“What really separated AODocs from the other solutions we looked at was that continuous validation of our functional requirements was included. This allows us to update to new releases and features as soon as they are validated, which saves us time, effort, energy, and burden. This has been a huge benefit and will save us thousands of dollars per year in validation costs.”

Hector Solano, COO, BioSB

About Bio SB

Bio SB develops, manufactures, markets, and distributes a portfolio of products for laboratories, clinicians, researchers, and patients. The company's products are used worldwide for applications in molecular pathology, cancer diagnostics and research, microbiology, immunopathology, immunology, and immunotherapy.

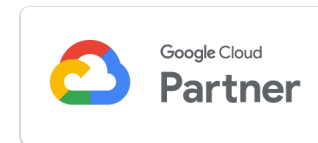

Vertical/horizontal solution: Healthcare & Life Sciences

Primary project location: United States

About AODocs

AODocs is the only business process platform built on top of Google, bringing together real-time collaboration and best-in-class AI capabilities.
