Caredoc - Application Development

Consulting & Techinical Support for cloud adoption

The challenge
We want to build a platform based on MSA (Micro Services Architecture) by making the most of the features of Google Kubernetes Engine, As a Devops environment for infrastructure construction, it is necessary to use an automation tool such as Teraform to build and manage, and it requires education and support for overall Google Cloud Platform, Google Kubernetes Engine, Network, etc.

The solution
1. Google Kubernetes Engine and Infrastructure related training 2. Consulting and support related to Google Kubernetes Engine construction and automation 3. Infrastructure construction support

The results
Caredoc is using all its services on Google Cloud Platform, and is building and operating a caregiver platform and eCommerce platform for Web & Mobile Applications.

> Caredoc is providing a service to create a transparent caring (care) market by solving the asymmetry of information between consumers and carers (caregivers) by building a carer platform based on the Google Cloud Platform.

About CareDocs
It is possible to easily and conveniently search national nursing facility information verified through mobile apps and web, and provides objective nursing information. For customers who cannot use nursing facilities, we provide customized care services to caregivers who have been verified in advance. We provide Tool for nursing facility operators.

Industry: Healthcare & Life Sciences
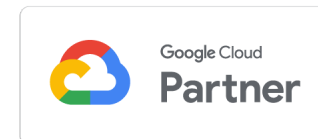

Primary project location: South Korea
