

Google Cloud Platform Learner Profile with Apigee

Design, Development, and Implementation of new Student Learner web portal

The challenge

Customer's current technical environment is comprised of multiple disparate systems as well as applications that collect ad hoc data with minimal integration capabilities. Their goal is to enhance the education experience with data driven insights

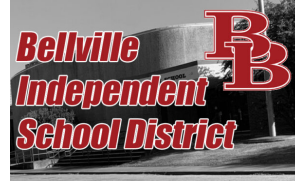

The solution

A new Learner web portal using GKE and Apigee for API management to support a modular approach to the Learner System and allow for AI insights on student data.

The results

Softchoice built a new modular Student Learner portal to support student profiles, demographics, attendance, discipline, academic data, goal setting, and a portfolio dashboard. This will become the base framework for Bellville's Tailored Learning AI-Powered platform to enable learning thru student passion and aptitudes.

The Softchoice design and development of our Learner Portfolio brings to life what has previously been only a concept. The digital portfolio will unearth new opportunities for student and teacher development.

About Bellville Independent School District

Bellville Independent School District is a K-12 education system located Bellville, TX. They currently have ~2000 students enrolled

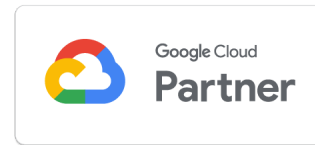

Industry: Education

Primary project location: United States
