

Masthead Delivers HIPAA-Compliant Data Observability for Daybreak

Masthead helped Daybreak gain visibility into the processes within their data environment, shedding light on how malfunctions in their data warehouse can impact their business processes while still adhering to data privacy and security regulations.

The challenge

With a rapidly growing user base, Daybreak Health faced challenges handling data from various sources. Ensuring the protection of patient data was vital for Daybreak due to HIPAA compliance. That's why data observability tools that query data did not fit Daybreak. Their data team required a data observability solution that would not pose any risk or threat to the patient data.

The solution

Masthead observes all of Daybreak's data assets, including datasets, tables, and views. It provides full observability into the data delivery happening within clients' Google Cloud projects without accessing the actual data. Masthead's data dictionary and lineage features enhance collaboration for Daybreak teams by allowing them to track their data assets and their connections in a single place.

The results

Daybreak partnered with Masthead to gain reliable and secure observability for their pipelines, data assets, and cloud environment. Masthead provides complete visibility into data flows, enabling seamless collaboration between teams. Masthead's prioritization of data privacy and security protects sensitive data while ensuring fast problem-solving approach reduces disruptions to Daybreak operations

“ The ability to obtain a comprehensive view of all processes within our Google Cloud project without giving the solution access to our data was a game-changer for us. Masthead's unique log-based approach provides a comprehensive view of our data environment. It has saved us both time and money, and the level of insight we're now able to gain is truly invaluable. ”

Shanhui Bono, Lead Data Engineer, Daybreak Health

About Daybreak Health

Daybreak Health is mental health support platform, making it easy for young people, families, and schools to create accessible and efficient mental health programs. With over 70 clinicians available, the platform connects youth with the right therapist for their specific needs. The Daybreak mobile app keeps patients in touch with their clinicians.

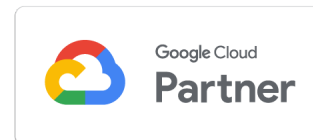

Industry: Healthcare & Life Sciences

Primary project location: United States

About Masthead Data Ltd.

Masthead delivers data observability without compromising data privacy or security. It helps data teams to identify data malfunctions in real-time.
