

Fednot's Journey to the cloud and Google Cloud app development

Devoteam G Cloud provided their extensive knowledge with Google Cloud Services and Google Cloud app development to help Fednot develop new applications for citizens.

The challenge

As more and more administration is digitised, citizens expect the ability to handle much of their day-to-day administration digitally, from banking to signing important documents. Fednot believed that it was essential that the notary profession kept up with this trend and pushed to develop user-friendly and modern applications for citizens, for this a modern cloud solution was necessary.

The solution

With such a wide range of tools, Fednot saw it necessary to reach out to Devoteam G Cloud for help. Not only to help them navigate the Google Cloud ecosystem but also to build up their expertise internally. To provide the necessary knowledge, Devoteam provided a range of workshops. These workshops aimed to provide Fednot with the internal competence to develop their perfect cloud solution and apps

The result

With this Google Cloud Solution, Fednot launched the app Biddit which was positively received by citizens for its user-friendliness. With Google Cloud Fednot has begun work on more applications for the future, such as StartMyBusiness. Google Cloud has given Fednot a foundation for its future digitisation efforts and Devoteam G Cloud provided them with the internal knowledge to develop these apps.

“ The workshops were very professionally organised and communicated. We really needed this, these workshops were very essential for our teams and our federation. ”

Jan Sap - CEO of Fednot

About The Federation of Notaries

The Federation of Notaries (Fednot) is the professional association of Belgium's notaries. It supports notaries with their day-to-day operations including providing legal advice, office management, IT solutions, training and providing information to the public. It boasts a network of 1126 offices, bringing together 1646 notaries and 9794 employees.
