

# How FoodChéri Syncs MongoDB to BigQuery for Quicker Insights

FoodChéri used Dataddo's out-of-the-box database connectors to replicate data from MongoDB and MySQL to BigQuery.

## The challenge

Foodchéri wanted to access its operational data to gain valuable insights into its processes, operations, and customer behavior. However, as the operational data was located in business-critical systems (MongoDB, MySQL), it was crucial to find a way to access the data that would minimize disruptions to production systems and reduce engineering complexity.

## The solution

Dataddo has provided CDC-based data replication between FoodChéri's operational databases and their Google BigQuery data warehouse. Near real-time replication of production data has created a safe environment in BigQuery for data analysts to perform complex analytics queries and asymmetric workloads. Monitoring, alerting, and anomaly detection ensure that all delivered data is high-quality.

## The results

- Successfully replicated data between databases - from FoodChéri's production databases (MongoDB, MySQL) to a data warehouse (BigQuery) for analysis, without disrupting the production system.
- Transferred large volumes of data (1+ TBs of data daily)
- Reduced infrastructure bill by 25-50% via CDC-based replication by transferring only the data that changed instead of performing full replicas.

“ We chose Dataddo for its user-friendliness, automatic transformations, clear pricing policy, and the quality of the human relationship that was established from our first exchanges. In the end, we understood we could bring a lot to each other. ”

Laurent Partouche, CPO/CTO, FoodChéri

# FoodChéri.

## About FoodChéri

French company FoodChéri specializes in delivery of healthy, ready-made employee lunches to businesses in the greater metropolitan area of Paris. Their sister brand, Seazon, offers flexible, subscription-based meal plans for busy individuals who want better nutrition without the hassle, and delivers weekly across all of France.

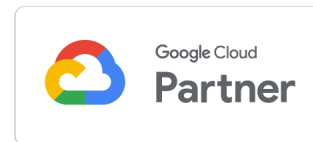

Industry: Food, Beverage & Restaurants

Primary project location: France

## About Dataddo Inc.

Dataddo is a no-code data integration platform built for business and data teams allowing them to connect data from any source to any destination.
