

Tech Innovator Maki Uses Virtru Private Keystore for Google Cloud

With Virtru, Maki can leverage Google Cloud EKM (External Key Manager) with heightened privacy, storing private encryption keys separately from Google, automatically encrypting sensitive information while Virtru manages key exchanges and policies.

The challenge

Maki handles sensitive, personally identifiable information (PII) on behalf of candidates, as well as strategic hiring information on behalf of its corporate clients. As a highly sophisticated HR tech platform, Maki must also safeguard the intellectual property behind its sophisticated candidate assessments. The company needed a key management partner for advanced security and privacy.

The solution

Maki chose Virtru as its key management partner for Google Cloud EKM, because it gives the company an independent layer of security and sovereignty for data stored in Google Cloud. Maki can be sure that its data cannot be accessed by Google or any other third party without their permission. The Virtru Private Keystore works seamlessly, behind the scenes, so Maki can focus on growing its business.

The results

The Virtru Private Keystore proved to be the solution that was most reliable and easy to deploy. "With Virtru, it was straightforward," said Chino. "We contacted you, you answered. We hopped on a call, and then implementation was easy as 1, 2, 3. So that was great." Within two weeks of contacting Virtru and implementing the Private Keystore with Virtru's deployment team, Maki was up and running.

“ The Virtru Private Keystore is super seamless. Everything is running smoothly. From a customer standpoint, it really makes a difference: They now feel that they're much more in control. ”

Benjamin Chino, Co-Founder and CPO, Maki

About Maki

Maki is a modern assessment platform that connects candidates with their ideal jobs using cognitive aptitude tests, job-specific skill evaluations, and even language and personality assessments. It serves as a bridge between candidate and employer.
