

Wipro helping digital transformation for Adani Group

Wipro is Primarily involved in SAP & Non-SAP Transformation & Managed Service with Agile delivery support.

The challenge

Adani Group had approximately 750 VMs hosted in 11 On-premises Data Centers. They had SAP application & Non-SAP Application, which was difficult to manage, lacked in performance, scalability, unable to meet business growth. Due to Silo and decentralized approach applications were complex to maintain. Operational costs were high due to frequent downtime and seasonal peaks.

The solution

Adani partnered with Wipro for support in its migration of SAP & Non-SAP workload to Google Cloud infrastructure services by using Google's Tool & suggested best practices. Through this arrangement, Wipro would manage infrastructure and observability of Adani's entire Google Cloud environment, including cost optimization using Google best practices and third-party tools.

The result

Wipro developed a scalable environment using Google's Tool & suggested best practices with a service support model which optimized Adani's operational costs. By using Wipro support system Adani can also now easily access reports and alerts on performance, uptime/downtime, and use predictive analysis to anticipate issues, prevent downtime, and create an overall more stable environment.

“We are happy to convey that Wipro provides a comprehensive and very professional service to Adani & managing our Google Cloud environment”

Surit Kumar, Deputy General Manager - Information Technology, Adani Group
