

E-Xyon: Uma migração que superou expectativas

For this platform migration process, support from IPNET was essential. The consultative skills of the team allowed the migration of the entire operation in 1 month, where normally a project of this magnitude would take 4 months.

The challenge

Move around 50TB of data in 30 days, using Google Cloud's secure tools, coordinating minimum maintenance windows, ensuring zero impact to our customers, and total integrity of our data.

The solution

In the end, the adoption of the cloud architecture made possible by Google Cloud provided us with greater flexibility in our operation, scalability of our services and greater market competitiveness.

The results

We came to this platform and were able to have more autonomy over the infrastructure, in addition to delivering cutting-edge technology to our solutions, in addition to a reduction of more than 30% in our operating cost.

“ Partnership with Google gave us the most favorable conditions possible for this digital transformation. We hope to evolve more and more in the technological and financial efficiency of our infrastructure, seeking to bring, on a continuous basis, the best experience for the companies of the e-XyonPar Group, and for our end customers. ”

Allan Edward - IT Director

About E-Xyon Tecnologia e Informacao Ltda
