

Tauzer Apiaries Secures Company Data with Google Workspace

HiView planned and executed the data migration from consumer/free Google Workspace accounts to a new Google Workspace Business Standard environment, and executed change management to help the Tauzer Apiaries team receive all the platform's benefits.

The challenge

After spending some time using free consumer (free) Google Workspace accounts for their business, the sustainable beekeepers at Tauzer Apiaries grew frustrated by the limitations to Gmail management and file access control. They were ready for a new solution to streamline their processes and workflows. Data was to be migrated from consumer Google accounts and Media temple, with four total domains.

The solution

The HiView technical lead migrated all email data to the new Google environment using Cloud Migrator. Because there is no effective tool that systematically migrates Drive data from a consumer account, this needed to be executed by the Tauzer Apiaries team. HiView advised company leadership about this process. One user training session was held, and communications were sent to all team members.

The results

All users were successfully migrated to Google Workspace Business Standard, and Gmail aliases were created for all four of the secondary domains. With the help of the training session and instructions shared, the Tauzer Apiaries team now reaps the full benefits of their new environment while enjoying improved data controls and collaboration capabilities.

“Thanks to HiView’s migration expertise, our data is far safer and better organized than ever before. Plus, now we have access to their support team to ensure our long-term success on Google Workspace!”

Rachel Morrison, Outreach and Education Manager, Tauzer Apiaries

About Tauzer Apiaries

Tauzer Apiaries is a family-operated team of beekeeping professionals providing pollination services to northern California farmers. Their subsidiaries include specialty honey producer Sola Bee Farms and bee and beekeeping product vendor Honey Bee Genetics.

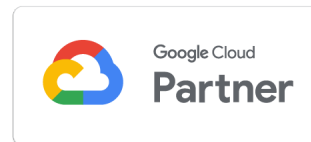

Industry: Agriculture
