Aiqfome reduces costs and increases scalability moving to GCP

IPNET migrated the AWS environment to Google Cloud with a structured approach, following best practices and working strategically to ensure a safe transition, overcome challenges, and maintain operational continuity during the critical period.

The challenge

To reduce costs and integrate with Magalu's ecosystem on Google Cloud Platform, Aiqfome migrated from AWS, aiming for cost savings and modernization. The previous infrastructure incurred extra costs and limited group service integration. The transition provided greater control, efficiency, and flexibility, optimizing resources and processes.

The solution

Aiqfome aimed to reduce infrastructure costs by migrating from AWS to Google Cloud. Along with the migration, IPNET modernized the client's infrastructure, shifting from Elastic Container Service to Google Ku.çl;bernetes Engine. This transformation enhanced scalability, efficiency, and integration within the Magalu ecosystem.

The result

With the migration, Aiqfome reduced costs despite expanding its tech infrastructure, while also fixing security flaws and improving access governance. It gained better visibility into configuration issues and cost optimization opportunities. The shift to strategic technologies ensured greater efficiency and alignment with the company's long-term vision.

> " We had constant support from IPNET's leadership to overcome migration challenges during a critical business window. The project was successfully delivered, ensuring our operations in November, the most important month of the last quarter in revenue and visits. The team showcased strong expertise and technical availability, embracing our strategic decisions and contributing to our success. "
