Partnership with Exeter Uni to support digital transformation

Ancoris was tasked with building a productivity app for students, offering an integrated platform to house all the information that students require to be productive throughout the day.

The challenge

Working with all members of the University including the student committee, lecturers, and researchers, Ancoris created a proof-of-concept (POC) app which focused on resolving the main pain points of the students, prioritising staying on top of important university emails and announcements.

The solution

Ancoris was able to help students effectively address deadlines and events through a simple timeline displaying upcoming events, important deadlines and university meetings with a customised event feed for each student. This architected using an entirely serverless backend leveraging Firebase for hosting, exposing APIs with functions & Realtime database for responsive UX.

The results

Ancoris was able to help students effectively address deadlines and events through a simple timeline displaying upcoming events, important deadlines and university meetings with a customised event feed for each student. With a simple, speedy development and agile management from Ancoris, the team was able to quickly provide new digital capabilities to the University, illustrating the impactful tra

> " "Ancoris was able to offer a collaborative, automotive and whole-team approach to the project and it was a huge success. Our students, members and team come first at our University so providing a helpful tool to make lives a little easier is a great achievement". "
