hMetrix

Foresite served as a security engineering advisor and managed security service provider, guiding hMetrix through the implementation and operationalization of Google SecOps.

The challenge
hMetrix sought to enhance their security posture and streamline security operations with Google SecOps. They needed to consolidate all SOAR operations in a single high-performance solution that would scale.

The solution
Foresite provided a comprehensive solution encompassing consulting, enablement, and ongoing managed services. This included security team enablement, migration, deployment, and assuming the role of their managed security service provider for continuous support and optimization.

The result
hMetrix successfully implemented Google SecOps and leverages Foresite's expertise as their managed security service provider. This partnership improved their security posture, streamlined operations, and enhanced threat detection and response.

> **"** Foresite's enablement workshops were top-notch. Their team's knowledge and ability to impart that knowledge was exceptional. **"**
