Rasa Hospitality - Productivity and Security

We suggested Rasa Hospitality used Google Workspace for Business to centralize their data in Google Drive.

The challenge

Rasa Hospitality had their data scattered across different systems, such as their Customer relationship management, accounting software, and hotel management system. This made it difficult to access and manage the data, and it also made it difficult to get a complete picture of the business.

The solution

Using Google Drive to access the data they needed, and it also made it easier to keep the data up-to-date. Google Drive also provides features that allow Rasa Hospitality to collaborate on files, share files with clients, and set permissions for files.

The result

Employees can collaborate on files in real time, which makes it easier to get things done, Google Drive provides features that help to keep data secure, such as two-factor authentication and file encryption.

> Google Workspace for Business has helped Rasa Hospitality to improve their productivity, collaboration, security, and cost-efficiency. They are very happy with the results they have achieved and believe that the platform has helped them to improve their business operations and better serve their guests.

About Rasa Hospitality
