

Beekeeper Serves Up Secure Communications, Data, and Applications

Sysdig partnered with Beekeeper to demonstrate the advantage of unifying visibility and security across containers, Kubernetes, and cloud services. Using the Sysdig platform, Beekeeper can get insights and respond to issues quickly.

The challenge

Because its customers collect and share information, Beekeeper needed to provide all of the safeguards necessary to moderate risk and protect data while providing remote, frontline workers with reliable applications. Within its cloud-native environment, a lack of visibility and automation hampered the team's ability to detect anomalous behaviors and threats, slowing response times.

The solution

Beekeeper uses Google Cloud and Google Kubernetes Engine (GKE) to operate and scale its workforce communications platform. Sysdig has collaborated with Google Cloud to integrate visibility and security solutions together with Google Cloud services that enable Beekeeper to confidently run applications in the cloud.

The results

Leveraging Sysdig with Google Cloud has provided Beekeeper with the confidence that their apps and infrastructure are healthy and secure, enabling them to ship apps faster. By more efficiently pinpointing issues and potential threats faster along with streamlining compliance, Beekeeper has saved time equivalent to a full-time engineer.

“Every person that uses our platform demands a high-quality experience. From a single pane of glass within the Sysdig dashboard, we can see what's going on in each cluster and be agile with how we identify and resolve issues across clouds.”

Michal Pazucha, Security Architect, Beekeeper

About Beekeeper

Beekeeper is the leading mobile workforce productivity and collaboration platform for frontline workers. With all communications and tools in one place, teams can improve business agility, productivity, and safety, resolve issues faster, and manage non-routine work more efficiently.

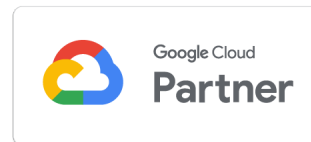

Industry: Software & Internet

Primary project location: United States

About Sysdig

Sysdig is driving the standard for cloud and container security enabling teams to detect and respond to threats from source to run.
