

CloudMile Supports Aetheras to Expand the GameFi Ecosystem

CloudMile helps Aetheras during its project development, offering cloud tool consumption and billing visualization tool to easily manage its cloud platform.

The challenge

To secure agile development, user experience, and affordable pricing for startups, Aetheras eventually selected GCP and CloudMile to be its technical partners.

The solution

The Aetheras team uses Google Kubernetes Engine (GKE) to deploy their game services. Leveraging the unique strengths of Serverless Service, Aetheras also uses Google's serverless platform, Cloud Run, for product testing and development which is fully managed through Google Cloud. Aetheras is now evaluating cloud-based data warehousing and visualization tools to monitor resource allocation on GCP.

The results

1. Support Aetheras to adopt Cloud Run 2. CloudMile offers transparent cloud consumption and billing visualization tools. 3. CloudMile now is helping Aetheras to evaluate cloud data lake/data analytic solutions to optimize its product, Agence.

“ We are very thankful for the CloudMile team for providing a highly transparent view of our cloud usage and billing along. We look forward to further collaboration via both technology and co-branding.

Teddy Lee, Co-founder, Aetheras

AETHERAS

About Aetheras

Aetheras aims to create software to improve lives, whether through solving problems, providing entertainment, or both. We believe blockchain technology, with its ability to promote transparency and fairness, offers the world huge opportunities for innovation.

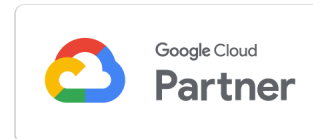

Industry: Gaming

Primary project location: Taiwan

About CLOUD MILE LIMITED

CloudMile is a Data Analytics and Artificial Intelligence company empowering businesses to accelerate digital transformation through cloud technology.
