

Fundação Roberto Marinho

IPNET's proposal was to carry out the configuration and migration service of 10 (ten) virtual machines from the current FRM infrastructure, which were in AWS, to Google Cloud Platform (GCP).

The challenge

FRM, as well as other companies in the market, are looking for technologies that facilitate the management of their IT workloads, guaranteeing the lowest possible SLA for their internal and external customers. In addition, it was a priority for the institution to make use of the economies of scale provided by the advent of Infrastructure as a Service (IaaS).

The solution

IPNET's proposal was to carry out the configuration and migration service of 10 (ten) virtual machines from the current FRM infrastructure, which were in AWS, to Google Cloud Platform (GCP). IPNET was responsible for the project management and migration of servers and databases from AWS to GCP, we are committed to carrying out the migration within the best recommended practices

The result

After migrating the 10 VMs that totaled 4.5TB of data, the FRM team saw the following benefits from migrating to GCP: 1 - Cost reduction; 2 - Advanced support; 3 - Resources more in line with our needs; 4 - We gain more mobility; 5 - Use of Google's search power.

“IPNET was presented to us as a Google partner to carry out a migration project for 10 instances of servers and databases from AWS to GCP. We started the project by mapping all the existing resources and how each one could be migrated. We started running as planned by migrating the servers from one cloud to the other without any issues. When a more punctual configuration was needed.”

Leonardo Vieira

About Fundação Roberto Marinho

The Roberto Marinho Foundation is a partnership house with public and private institutions, with whom it forms a cooperation network in favor of education. Bearing in mind that communication and innovation are allies in the promotion of an integrated and quality education.
