

Rethink language - Make sense of language data

T-Systems provides digital sovereignty to Lengoo's platform with sovereignty controls for Google Cloud Platform. Lengoo now is able to gain more trust from its customer by meeting their customers requirements regarding data privacy and data security.

The challenge

Whether for internal communication, or for external blog posts and news that a company publishes, the entire data pool of inputs for any communication within a company has a major impact on the quality of machine translation and other language technology. Therefore all company's data are considered sensitive and unique. Protecting them is one of the corporate values that Lengoo is committed to.

The solution

With T-Systems Sovereign Controls, the fast-growing language tech company benefits especially from the Data residency controls. Customer data now are stored in Google Cloud's German region, while the Encryption keys are stored and managed by T-Systems outside of Google's infrastructure. Further security services by T-Systems also ensure greater operational and software sovereignty.

The results

T-Systems Sovereign Cloud powered by Google Cloud reduces security concerns about the safety and protection of Lengoo's customer data and delivers real added value in respect to data sovereignty. The young company can now fully concentrate on the further development of their AI system HALOS and facilitate their clients to work on high quality translations.

“ The T-Systems Sovereign Cloud powered by Google Cloud creates more data sovereignty and thus more trust for Lengoo's customers in our language-based AI solutions. ”

Alexander Gigga, CMO, Lengoo

About Lengoo GmbH

Lengoo leverages the quality of translations by transferring the expertise of the world's best language professionals to their individualized AI system. HALOS (Human-Augmented Language Operating System) understands the company-related context and supports whenever someone works with language such as creating mails, transcriptions or translations.

Industry: Software & Internet

Primary project location: Germany
