

TU Europa - secure landing zone

OChK provided a landing zone, i.e., a ready-to-use complete IT environment in Google Cloud, which fulfills requirements of the Polish Financial Supervision Authority for supervised entities.

The challenge

In order to deliver innovative digital projects to its customers, TU Europa needed an appropriate IT environment. Google Cloud answers this need. However, an insurance company has to be sure that clients' sensitive data is processed in line with all the security and compliance requirements, which calls for additional work.

The solution

OChK experts provided a secured landing zone, which means delivering a ready-to-use Google Cloud environment that meets the requirements of the Polish Financial Supervision Authority for supervised entities. OChK did the technical work to harden security and ensured that some formal issues were addressed as well. To provide knowledge about Google Cloud, Kickstart Programme was provided.

The results

Now TU Europa can safely reap the benefits from Google Cloud in compliance with existing regulations. Google Cloud environment tailored to the customer needs fulfills the usage of public cloud in the Polish financial market. As a result, TU Europa is well equipped for the coming years of its growth.

“The competitiveness of any insurance company as specialized in partnerships as we are stems from agile processes supported by scalable and easily modernized technology. We believe that significant investments in cloud solutions built in cooperation with OChK will launch us to new levels in terms of data analysis potential and product development as well as enhanced business scalability.”

Grzegorz Pawlicki, CIO and member of the board TU Europa
