

Agito - Improved Efficiency & Productivity with Google Workspace

Global IT is not just helping with migration, they also play a vital role in supporting customers to increase adaptation scores; such as solving problems faster, advising expertly with knowhow and implementing expand & embed methodologies.

The challenge

Insurtech industry needed a collaborative ecosystem in and out of the company because what was developed by one company/department is used to improve another solution by someone else as a chain of transformative business lines. That's why they required a high level of collaboration; quality of online meetings, and improved efficiency in the works done by multiple users collaboratively.

The solution

The project was started with technical kick off meetings just after Agito completed the purchase for Google Workspace product. Meetings were planned with the relevant teams. The project management panel (Jira) was created and signed within the framework of the determined timeline. All steps and details were carried out within the framework of the specialization methodology determined by Google.

The results

In the collaborative ecosystem established by Workspace, following improvements were observed: Accessibility anytime&anywhere resulted in increased performance. It also allowed employees to optimize how they work&collaborate, leading to significant improvements in efficiency & productivity with minimal errors. Better quality of online meetings. Simplicity in account management & cost optimization.

Even in accounts with more than 100K mails in their mailbox, the search results in the lower panel are displayed instantly / at once for each typed letter. Efficiency and productivity in all user based cases are improved thanks to Google Workspace solution and support of Global IT during the whole transformation process.
