

Work Transformation- Kloudrac Software

Sonata worked closely with Kloudrac to identify the limitations of their legacy Virtual Private Network systems and mapped them to functionalities in Google Workspace. Sonata team was able to successfully improve productivity and collaboration.

The challenge

Remote employees often experienced connectivity and performance issues using the corporate Virtual Private Network, limiting their productivity. Real time collaboration was impossible on the legacy office tools slowing business processes, delaying the company's ability to deliver new services and respond to customer needs. Kloudrac was required to maintain regulatory and privacy obligations too.

The solution

Sonata enabled Kloudrac to utilize tools like Gmail, Drive, Sheets, Docs, and Calendar which helped employees in breaking out of their traditional, legacy work model into an efficient collaborative model. User identities were created for the employees to enable them to securely access the organization's resources. Administrators now had control and the platform provided valuable security insights.

The results

2 step verification and password compliance helped improve security. Through training and adoption programs Sonata was able to successfully increase collaboration through Drive. The senior management had capabilities to security Reports, Drive Audits, Activity Reports, App Usage Statistics, Data Leak Reports, etc.

“ Sonata was instrumental in helping us adopt the collaborative features of Google Workspace. The team was professional and courteous. ”

Atul Singhal, Co-founder, Kloudrac Software Pvt. Ltd.
