HyTest Replaced Manual Routine Work with Computer Vision

Codento delivered the solution to HyTest as a turn-key solution, which meant that HyTest's IT resources were not eaten away in this project.

The challenge

The processing of HyTest sales orders included a lot of manual steps. The product range consists of 1,500 different products, and each purchase order is unique. HyTest also need to adhere to the order processes of our customers – especially the largest ones, which means that each order, coming from all corners of the world, is different. Thus, needing a lot of manual steps.

The solution

Codento implemented HyTest's Optical Character Recognition (OCR) solution utilizing Google Cloud's DocumentAI platform.

The result

Huge annual savings in the manual work HyTest people were doing before

> **"** We saw this computer vision system could automate the entire purchase order extraction, validation, and entry process. We want to enable our people to do something more meaningful with their time **"**
>
> Niko Västilä, Head of Digital & Ecommerce at HyTest

About HyTest

For over 25 years, HyTest has manufactured antibodies and antigens mainly used as raw materials for in vitro diagnostics. The company is renowned for uncompromised quality, from product development to safe and secure deliveries worldwide.

Vertical/horizontal solution: Healthcare & Life Sciences

Primary project location: Finland

About Codento Oy

Codento helps you to gain competitive edge via customer foresight, smarter operations, and software intelligence on next generation foundation.
