TACO : Building A Cloud Journey For Designed Surfacing Solution

With EIKON's guidance, TACO was able to build a secure, stable platform that optimize its process.

The challenge
TACO, as a growing company, requires to increase its exposure to the market than it used to. With technology as its backbone, TACO wants to improve their website availability and scalability. While simultaneously strengthening its own system security.

The solution
To achieve the company's goal, TACO used a Cloud Platform that would monitor its Web Server and Domain Name System. With Cloud Platform, TACO can bring as much potential as possible. While the company continues to innovate, TACO can look up to EIKON and Google to keep providing the tools needed to build the best possible platform it can.

The results
As soon as using GCP, TACO website availability / up time improved, by doing so the security also got better, reducing suspicious activity. Maintaining infrastructure is easier as the low latency issue was resolved and yet the overall costs reduced.

> As TACO continues to innovate, it can look up to EIKON and Google to keep providing the tools needed to build the best possible platform it can.

About TACO
TACO Group is a leading provider of designed surfacing solution, luxury vinyl flooring and furniture fitting hardware for commercial and residential.

Industry: Manufacturing & Industrial

Primary project location: Indonesia
