

Artnet increases efficiency by 280X as they move to Google Cloud

MediaAgility advised Artnet to migrate their on-prem infra to Google Cloud as the most appropriate infrastructure fit; given the cloud's global scale and security. The shift was to help Artnet transform its IT infrastructure with rapid lift and shift

The challenge

Artnet application was running on the legacy system and had been compromised due to security vulnerabilities. They were looking for improvements in security, scalability and managing the access controls.

The solution

Mediaagility team migrated on-prem database and applications running on legacy systems to GCP using velostarata and terraform.

The results

Cost saved with real-time scale up and down. Security in design: Data security and compliance using SCC and Identity Aware Proxy.
Performance improved

“Despite the fact that it became a much bigger effort, MediaAgility still helped us finish the work and when we actually went to production, the launch went much more smoothly than we anticipated. As the MediaAgility team collaborated with my engineering teams, there was a tremendous amount of knowledge transfer and a willingness to go above and beyond to get the results we needed.”

Matthew Cochran, CTO, Artnet

About Artnet

Founded in 1989, Artnet is the leading online resource for the international art market where people buy, sell, and research art online.

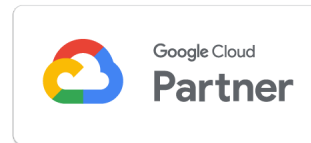

Industry: Other

Primary project location: United States
