

Colgate-Palmolive Furthers Their Cloud Security Maturity

Wiz is an agentless cloud security tool that performs a deep assessment of a customer's entire Google Cloud environment and then correlates a vast number of security signals to trace the real infiltration vectors that attackers can use to break in.

The challenge

As Colgate-Palmolive expanded their Google Cloud usage, they needed to modernize their security tooling to handle the specific needs of Google Cloud. Colgate-Palmolive also needed visibility, context, and responsiveness tailored to Google Cloud to address critical cloud issues like Log4j whenever they may arise.

The solution

Wiz's agentless solution gave Colgate-Palmolive coverage of dynamic compute types and insecure use of secrets in Google Cloud. Colgate-Palmolive also used Wiz to rapidly tackle Log4j with full visibility and the ability to route their findings to the right teams for remediation.

The results

Wiz was the key tool that Colgate-Palmolive used for Google Cloud that was able to empower them to detect and remediate Log4j at the speed, scale, and level of accuracy the issue demanded. As a result, Colgate-Palmolive extended Wiz across their entire Google Cloud environment, and were able to quickly identify and tackle their instances of Log4j.

“Wiz helps educate non-cloud experts and enables new ways for security practitioners to work directly with developers and cloud architects. It fosters collaboration across our teams, helps them really understand what the problem is, communicate it in a common language, and collaborate with peers to get it remediated. It's not just a tool for security.”

Alex Schuchman, CISO, Colgate-Palmolive

About Colgate-Palmolive Company

Colgate-Palmolive is a global consumer goods company, known for its home care, skin health, personal care, and pet nutrition products.

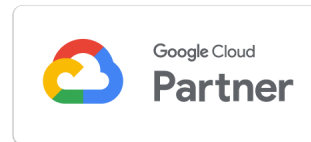

Industry: Retail & Wholesale

Primary project location: United States

About Wiz, Inc.

Wiz delivers full stack coverage of all workloads on Google Cloud Platform using a 100% API-based approach that deploys in minutes.
