

# Empresa pública da Prefeitura do Recife - Digital Transformation

Help the customer in the digital transformation, with a team of experts in Google Cloud

## The challenge

The City Hall of Recife, in the wake of the transformation it had been implementing, sought to implement processes that would modernize the handling of processes and documents, aiming to provide agility, transparency and eliminate the use of paper and protocols within the bodies linked to the City Hall. There was also the issue of the confidentiality of the data to be processed, protecting citizen

## The solution

The solution found by EMPREL for the modernization of process services was the implementation, under the guidance of Google and IPNET the TRF-4 protocol and document processing system. Using GKE, a managed database and VMs, EMPREL now has a processing solution running 100% on GCP, ensuring gains in scale, productivity and cost reduction both with infrastructure and with paper, stamps, etc

## The result

Emprel ensured the scalability of its environment, which today receives more than 600 daily processes, without interruption and also without spending on paper, generating savings. The value estimated by the institution today reaches a saving of around R\$ 3 million, not only in paper, but also in hiring printers and digitalization. In addition, EMPREL has real-time and cloud monitoring.

“They say that data is the new oil, but in reality, data is the new uranium: with uranium you create a clean energy plant or medical equipment that helps save lives, but on the other hand, you can create weapons most lethal on the planet. Here, our focus is on using data to care for and promote success for people. IPNET is an essential partner to leverage the use of this data in a positive way”

RAFAEL FIGUEIREDO BEZERRA - Vice President
