

Infrastructure Modernization in Asuransi Simas Jiwa

Smartfren will help Asuransi Simas Jiwa to implement the solution to get a new modern infrastructure from Google Cloud Platform and create a network connection between new cloud based infrastructure to existing on-premise infrastructure.

The challenge

Asuransi Simas Jiwa need to develop a new modern infrastructure with high performance and high availability to serve the internet accessed applications, also connect existing premise infrastructure to new cloud based infrastructure without sacrificing the security aspect.

The solution

Smartfren choose to bring Google Kubernetes Engine combined with Compute Engine to create highly available application backend, and successfully create a secure connection between new deployed Internet Facing infrastrucutre and existing on premise backend. To work at expected security and realibility level.

The results

Using Google Kubernetes Engine, application backend in Asuransi Simas Jiwa will find the benefits of modern infrastructure with autoscaling and high availability performance. To enable the existing on premise system connected to new modern cloud based infrastructure, Smartfren also successfully integrate cloud based networking resulting a secured and reliable network connection.

Smartfren successfully help Asuransi Simas Jiwa to deliver modern cloud based infrastructure, and implement secure cloud based connectivity between existing and new infrastructure.
