# SHIZA.ai - Cloud Foundations

KloudStax delivered hands-on professional services by implementing SHIZA.ai's GCP cloud environment and facilitating educational sessions to ensure an efficient environment transition.

## The challenge

Google's Cloud Startup program offered SHIZA.ai attractive financial incentives to switch from AWS, but their main hesitation was familiarizing their team with the new environment. After engaging with KloudStax and participating in training sessions, SHIZA.ai feels much more confident about transitioning to GCP.
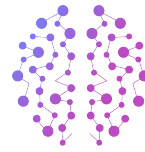

## The solution

SHIZA.ai's environment includes MongoDB Atlas instance, containers, IAM, Cloud Storage, Artifact Registry, GitLab from GCP Marketplace, Database, and service connections.

## The result

KloudStax successfully equipped SHIZA.ai with a fully operational cloud setup in GCP, including the deployment of MongoDB Atlas, containerization, IAM, Cloud Storage, and Artifact Registry. The solution was enriched with GitLab, database services, and essential service connections directly from the GCP Marketplace, demonstrating KloudStax's comprehensive approach to creating a tailored environment

> " "We finished the last session a few hours ago, and I found them to be quite helpful. I also wanted to express my appreciation to you and the team for accommodating us both from the language as well as scheduling standpoints." "
>
> Syed Hussain, Founder & CEO, SHIZA.ai

### About SHIZA.ai

Shiza.ai specializes in creating autonomous AI agents capable of building and developing custom language models. These AI agents act on your behalf, facilitating interactions and potentially automating various tasks with a personalized touch in communication.
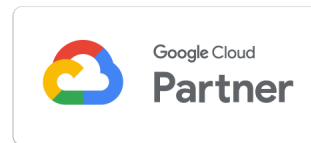

Vertical/horizontal solution: Software & Internet

Primary project location: United States

### About KloudStax

Our mission is to demystify the complexities of cloud technologies for businesses, empowering them to fully harness their digital potential.

### Products

Google Cloud Platform
