

# Woodpecker's Applications on GCP

The Cloud4C experts started with the DevOps workload assessment of the client. Based on that, they prepared a clearly defined blueprint and a detailed strategic plan. The Cloud4C experts started with the DevOps workload assessment of the client.

## The challenge

The complexity of the Existing cloud platforms, coupled with the organization's sensitive role, demanded an alternate infallible solution. Below were the key complications. 1. Continuous Deployment, 2. Access Control, 3. Infrastructure Management, 4. Data Security, 5. Data Security, 6. Cost Optimization, 7. Complex Environment, 8. Outdated Run Books

## The solution

With the DevOps workload assessment of the client Cloud4C prepared a clearly defined blueprint and a detailed strategic plan, and implemented the solutions like IT Service Management integration, Green Funnel and eLending deployment, CI/CD integration. We built the applications on Google Kubernetes Engine and deployed the containers in the country level

## The results

1-1.0 to 1.2 % of cost reduction on cloud. 2-24x7 Support 3-Better Resource Utilization 4-Improved Speed to Market 5-Effective Innovation 6-Accelerated Business Growth 7-Adept Global Expansion

“Cloud4C showed lot of excitement and interest in working with our Fintech team which never proved anything short of their business accumen. Gobear has benefitted tremendously from Cloud4C's Unique Selling Propositions of customer first approaches and their vast talent pool and expertise in DevOps, GCP & Kubernetes.”

Cloud Architect - IT, GoBear
