

Tecpal - GCP Infrastructure Optimized

CloudMile assists Tecpal to maintain its IT infrastructure on GCP, ensuring applications are working smoothly, optimized for cost efficiency, and all up-to-date to prevent costly data breaches.

The challenge

As Tecpal's worldwide base of several thousand users grows, the startup needed to improve its internal processes to scale with business growth and create a sustainable model. Tecpal also needed to improve its application security and encryptions to protect its ever-expanding attack surface.

The solution

With the managed service provider (MSP) support from CloudMile, TecPal has optimized its Google Cloud infrastructure and gained access to P1 support for its developers and data scientists in Hong Kong and Taiwan, respectively.

The results

Tecpal's IoT Core development has been smoothly transitioned while optimizing connectivity and latency, in order to improve the appliance control and monitoring experience. Tecpal can also ensure its data privacy compliance across diverse jurisdictions, such as GDPR in Europe.

“ We are impressed by CloudMile's competence in offering cost-effective technical support on GCP in a professional manner. They have shown their close relationship with Google Cloud and their solid experience in handling projects on GCP. ”

Harold Lo, CTO of Tecpal

About TecPal Ltd.

Founded in 2018, TecPal is a Hong Kong-based IoT solutions provider that unites cloud technologies, appliances, and lifestyle products for smart homes. Its product designers, engineers, and software specialists help original design manufacturers create an ever-expanding range of smart appliances for homes of the future.

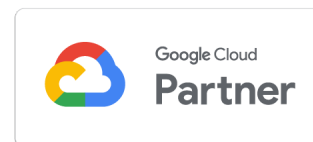

Industry: Software & Internet

Primary project location: Hong Kong
