

Building scalable, uninterrupted e-commerce solutions for grocers

DoiT played a pivotal role in optimizing Aktios' Google Cloud infrastructure, enabling scalability, cost savings, and expert technical support, facilitating streamlined operations and growth in the online grocery market.

The challenge

Aktios confronted a dual challenge: a complex billing system with 11 distinct accounts, necessitating time-consuming manual reporting, and the need for scalability to accommodate small grocery businesses. Initially requiring basic infrastructure, these businesses later demanded rapid expansion capabilities.

The solution

DoiT provided Aktios with a streamlined billing process, simplifying reporting and saving time. They also offered a flexible, scalable cloud infrastructure, expert technical support, and cost management, ensuring Aktios could efficiently serve its growing grocery business clientele.

The result

The partnership with DoiT yielded significant benefits for Aktios, including streamlined billing, cost control, scalable infrastructure, and expert support. This resulted in time and cost savings, efficient operations, and the ability to focus on delivering solutions to grocery businesses, ultimately driving growth and success in the dynamic online grocery market.

“When you drive a car, you don't check the engine—you just drive. The infrastructure supporting our services is the same. I don't have to worry about the infrastructure, I can just focus on the solution. This is what DoiT does for us.”

Gonzalo Perez Gasca, General Manager, Aktios
