

Quacito - Optimizing Field Services with Google Maps

Woolpert worked with Quacito to integrate Google Maps APIs into Dream Service Software, providing hands-on support, optimizing mapping tools, resolving technical issues, and ensuring scalable, efficient field service operations.

The challenge

Quacito, a software developer firm, needed an efficient mapping solution for their new route optimization tool for their product, Dream Service Software. Their initial direct use of Google APIs resulted in high costs, making scalability difficult.

The solution

Partnering with Woolpert Digital Innovations, Quacito integrated key Google Maps APIs, including Distance Matrix for route optimization, Autocomplete for streamlined address entry, and Geocoding for precise location data. Alongside their use of Google Workspace, Quacito tapped into Woolpert's expertise for significant cost savings and received hands-on technical support throughout the integration

The result

- Expert Support and Strategic Guidance: Enhanced technical support, with Woolpert providing hands-on support to quickly resolve issues and advise on new API features for future use cases.
- 70% Cost Savings: Reduced monthly API expenses from \$25,000 to approximately \$7,000.

“It's been one of the best partnerships I've seen in service providing. We've had last-minute needs, and the team is always quick to jump in and get us the right help. The customer service has been fantastic.”

Nitesh Jain, CEO, Quacito

About Quacito LLC

Quacito, a software developer firm, needed an efficient mapping solution for their new route optimization tool for their product, Dream Service Software. Their initial direct use of Google APIs resulted in high costs, making scalability difficult. Quacito sought a partner who could offer better pricing and technical expertise.

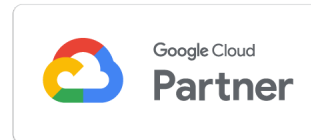

Vertical/horizontal solution: Software & Internet

Primary project location: United States
