Bupry - Application Optimization and Migration

The project consisted of bringing the native Bupry's solution to Google Cloud Platform to use it in conjunction with Cortex to extract data from SAP and work on it with Big Query.

The challenge
Develop the understanding on how to make Bupry's solution work in conjunction with Google Cortex Framework.

The solution
The solution was to adopt the Cortex Framework and use Bupry's solution as a connector to extract the data from SAP and bring it to pre-made tables in Big Query.

The result
Wit Bupry's solution, clients who have SAP will be able to connect their data to Big Query in a simple and automated way.

> ❝ Thanks to the implementation of Cortex Framework and BigQuery, we have managed to take our clients' data analytics to a higher level. This powerful combination allows us to: securely extract SAP data, enrich data with complñementary Google Cloud technologies. This allows you to obtain deeper and more relevant insights for the business. ❞
