Euroinnova deploys Identity Platform for its applications

Euroinnova was handling a huge amount of data together and expanding internationally. They looked for Devoteam to find a solution that has a direct and customizable authentication service for user registration and access.

The challenge
Euroinnova receives almost 7M monthly on its website and an average of 1,500 users enrol through its student portal. In order to manage the number of requests for registration and access to their services, and the management of user data, they needed a scalable and accessible solution, and help to implement this solution in their current services.

The solution
Euroinnova decided to use Google Cloud's Identity Platform as a core product in their strategy. Devoteam supported the client in their decision while helping look for other solutions that would solve the challenges faced by Euroinnova.With the help of third-party partners, they have developed a middleware that allows the connection with their existing services to the Identity Platform.

The results
Euroinnova now can consult the information of their users in a more centralized way, without having to check multiple dashboards and update wrong data without long queues and complicated processes. Also, Euroinnova has a scalable service capable of absorbing the registration peaks due to its loyalty campaigns.

> " This project represents a radical change in the way we interact with our clients and allows us to face our next challenges with the confidence of having a system that grows with us, as much as we need. "
>
> Rafael García-Parrado Corrales, Consultancy Director Euroinnova Formación
