

# Netstock Transforms the Way they Work with Google Workspace

DotModus provided overall project management, change management, as well as training and technical work during Netstock's domain migration from Microsoft to Google Workspace.

## The challenge

Previously, Netstock was using a hybrid solution of Microsoft Office and Google Workspace. Some of their locations were on Google Workspace while others were still using Microsoft. They wanted to take collaboration up a notch however the migration was very complicated and they needed help consolidating their data and streamlining it onto Google.

## The solution

DotModus worked closely with Netstock to understand and uncover their complicated requirements for the data migration. The solution DotModus designed and executed was designed to optimise collaborative working using one working ecosystem. Netstock is using Calendar, Drive, Meet, and Gmail. DotModus also supported the migration of Photos and Notes.

## The results

DotModus was able to successfully migrate Netstock's domain onto Google Workspace over one weekend with no business disruption or downtime. Key stakeholders received 2 user training sessions and were provided information packs to ensure best practices are followed and to empower Netstock to expand, collaborate and transform the way they work.

With DotModus' guidance and help, Netstock was able to migrate to Google Workspace with no disruptions to their business.

## NETSTOCK

### About Netstock

Netstock is a leader in inventory optimization and planning, giving 2,000 global challenger organisations predictive insights to maximise their inventory investment. Netstock's powerful demand planning software integrates with leading global ERPs and leverages real-time data to provide prescriptive recommendations for important inventory decisions.

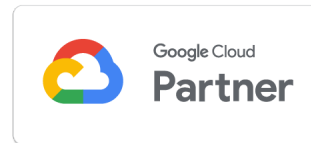

Industry: Software & Internet

Primary project location: South Africa
