

Vitalmex migrates its entire VM infrastructure to Google Cloud PI

The evaluation, migration and support services for the project were provided by Nubosoft.

The challenge

Vitalmex IT team was presented with one of the most common questions for an infrastructure management team, whether to continue with an on-prem hosted virtualized VM environment that had been generating sizing, stability and security issues or to finally take a step forward and migrate their infrastructure to the Cloud. After evaluating all the possible options, they concluded that the best option

The solution

Our engineering team carried out the evaluation on the architecture documentation provided by Vitalmex's IT team, corresponding to their on-premise servers that had different issues such as those already mentioned above. The first evaluation was aimed at deciding which workloads could be first migrated to Google Cloud.

The results

Vitalmex has freed itself from the burden and expenses derived from an on-prem infrastructure such as electricity, space, air conditioning and human resources; hardware obsolescence is no longer an issue, software updates are executed with a few simple command lines and virtual machines run with optimal configurations and no hardware limitations.

In Nubosoft, the company found the business partner it needed in their journey towards the cloud. Today, after just a few months, the company has its entire infrastructure hosted in Google Cloud, taking advantage of its scalability, technology offering and security.

About Vitalmex Internacional S.A de C.V.

Grupo Vitalmex was founded in 1976, as a health equipment and hardware vendor. From then on it began a success story that today has positioned them as the comprehensive service provider most important health center in Mexico in the field of kidney diseases and metabolic, cardiovascular, operating room and diagnostic imaging.

Industry: Healthcare & Life Sciences

Primary project location: Mexico

About Nubosoft

Nubosoft is a Google Cloud Premier Partner focused on the Mexican market and experienced in thousands of Google Cloud implementations.
